No part of any chapter or book may be reproduced or transmitted in any form by any means without the prior written permission for reprints and excerpts from the publisher of the book or chapter. Redistribution or other use that violates the fair use privilege under U.S. copyright laws (see 17 USC 107) or that otherwise violates these Terms of Service is strictly prohibited. Violators will be prosecuted to the full extent of U.S. Federal and Massachusetts laws.

Locking Memory

If processes need to stop their pages from being replaced, they can lock them in memory by calling the `VirtualAlloc` API. This should be a familiar notion, as we discussed object pinning in [Chapter 3](#), and that is all about locking memory. Regardless, it's usually best to leave it to the OS to decide its own page replacement policy.
